STANDARD OPERATING PROCEDURES

## **TABLE OF CONTENTS**

GENERAL APPROACH
STEPS TAKEN
STEP 1: IDENTIFY MAJOR TECHNICAL RISK AREAS 4
STEP 2: ASSIGN AN INITIAL ABSOLUTE LEVEL TO EACH RISK
STEP 3: LAY OUT A MILESTONE SCHEDULE
STEP 4: ASSIGN A LEVEL OF RISK REDUCTION ASSOCIATED WITH SUCCESSFUL COMPLETION OF MILESTONE
STEP 5: TRACK RISK REDUCTION RELATIVE TO TIME AND EXPENDITURES TO SHOW PROGRESS
RISK MATRIX EXAMPLE

## **Risk matrix**

Understand and quantify your major risks and know what you have to prove to get your product to market.

## **General approach**

- Quantify the level of risk in a technology
- Ensure that all milestones are focused on reducing risk
- Identify milestones that are most important to reducing risk
- Communicate the reduction in risk relative to time and cost involved

#### Steps taken:

#### Step 1

Identify major technical risk areas and failure modes by technology component

#### Step 2

Assign an initial absolute level to each risk

#### Step 3

Lay out a milestone schedule

#### Step 4

Assign a level of risk reduction associated with successful completion of milestone

#### Step 5

Track risk reduction relative to time and expenditures to show progress

# Step 1: Identify major technical risk areas

- Identify and group critical technical risks or failure modes by product component
- Groups of components also can have additional risks or failure modes

- Assign each risk a weighting factor on a scale of zero to 10, based on criticality and importance relative to component performance
- The weighting factors represent the importance of when something goes wrong

## khosla ventures

## Step 1: Identify major technical risk areas (continued)

- Each component or component group also can be weighted relative to its importance to product success
- Each failure mode represents a different way that a component can fail

Component	Failure Mode	Criticality Level
Component 1	Failure mode 1	10
	Failure mode 2	7
	Failure mode 3	5
Component 2	Failure mode 1	8
	Failure mode 2	8
Component 3	Failure mode 1	10
	Failure mode 2	10
	Failure mode 3	6

# Step 2: Assign an initial absolute level to each risk

• Assign an initial and absolute risk level, on a scale from zero to 100, based on your level of confidence in preventing the failure mode at a manufacturing level

• The total initial level of risk of a component is the weighted average of the risk levels of the failure modes

	Criticality Level	Initial Risk Level	
Component 1		63	
Failure mode 1	10	40	
Failure mode 2	7	90	
Failure mode 3	5	70	
Component 2		50	
Failure mode 1	8	70	
Failure mode 2	8	30	
Component 3		54	
Failure mode 1	10	80	
Failure mode 2	10	30	
Failure mode 3	6	50	

## khosla ventures

# Step 3: Lay out a milestone schedule

- List major project milestones (from Gantt chart)
- Each milestone is expected to reduce risk in one or more categories

No.	Milestones	Original Date		
1000	Component 1 tests			
1100	Milestone X1.1	03/31/05		
1200	Milestone X1.2	04/25/05		
2000	Component 2 tests			
2100	Milestone X2.1	03/31/05		
2200	Milestone X2.2	05/15/05		
2300	Milestone X2.3	06/15/05		
2400	Milestone X2.4	06/30/05		
3000	Component 3 tests			
3100	Milestone X3.1	03/15/05		
3200	Milestone X3.2	04/30/05		
3300	Milestone X3.3	05/15/05		
3400	Milestone X3.4	05/30/05		

# Step 4: Assign a level of risk reduction associated with successful completion of milestone

- Each milestone reduces the risk of a particular failure mode by some percentage
- When a milestone is achieved, the absolute risk associated with a component falls resulting in a reduction in the overall product risk (the average of all component risks)

Milestone			X2.1	X3.1	X1.1	X1.2	X3.2	X2.2
Milestone #			2100	3100	1100	1200	3200	2200
Date		01/15/05	03/15/05	03/15/05	03/31/05	04/25/05	04/30/05	05/10/05
Component 1		63	54.1	52.1	38.8	32.7	31.8	30.2
Failure mode 1	10	40		10%	50%		5%	
Failure mode 2	7	90	30%		10%	10%		
Failure mode 3	5	70			10%	20%		10%
Component 2		50	43.0	41.3	41.3	39.8	38.3	27
Failure mode 1	8	70	20%	5%				30%
Failure mode 2	8	30				10%	10%	5
Component 3		54	47.7	34.8	34.8	30.2	24.2	22.1
Failure mode 1	10	80	20%	40%			10%	5%
Failure mode 2	10	30				20%	20%	5%
Failure mode 3	6	50		5%		20%	5%	
Product		56	48	43	38	34	31	26

<sup>•</sup> Lay out risks and milestones in a matrix

## Step 5: Track risk reduction relative to time and expenditures to show progress

• For any component (and for product risk), risk reduction can be plotted relative to time and milestones

• Expenditures also may be plotted relative to time on the same charts

### Single component risk reduction

#### Product risk reduction

Note: Chart data maps to risk and milestone matrix
